**FOR IMMEDIATE RELEASE**

**Now in a convenient squeeze tube, new Mold and Metal Polish Cleans,  
Restores Tooling Surfaces**

Wheeling, IL — Plate-out, oxidation and stains on fine tooling surfaces can now be removed safely, quickly and cost-effectively with a new, multi-purpose polish from Slide Products, Inc. Ideal for all types of molds, dies and fixtures, Slide Mold and Metal Polish restores surface finish, while providing a high luster sheen.

Compared to competitive products that can cost twice as much, Slide's Mold and Metal Polish is a cost-effective alternative. It is also easier to remove than other polishes, and wipes on and off without leaving a residue. Applied with a soft cotton cloth or buffing wheel, it cleans and shines surface cavities and cores stained during plastics processing or fabrication. The new polish has proven effective on steel, stainless, aluminum, brass, bronze, beryllium, kirksite, zinc, powdered metals and other materials used in injection, blow, extrusion, compression, and rim molding.

Non-hazardous and non-corrosive, it cleans and shines diamond finished molds safely, without causing spiral webs, cattails or other fine surface scratches. It also cleans and shines acrylic, polycarbonate and other resins to a finish superior to the original molded, extruded or cast surface.

Mold and Metal Polish can also be used to clean screws, spruce bushings, and other molding and fabricating components. Made in the U.S.A., it comes conveniently packaged in 10 oz. cans, and now 1.76 oz. squeeze tubes.

Founded in 1953, Slide Products, Inc., an environmentally conscious manufacturer, makes mold releases, cleaners, rust preventives and more.
